

CRC Energy Efficiency Scheme

- New legislation from April 2010 requiring reporting of CO2 emissions
- Applies to companies with 6,000+ MWh annual energy usage
- Requirement to purchase emission certificates in April 2012 at £12 per CO2 tonne
- Minimum charge of £38,000
- Financial penalties for companies failing to reduce emissions

What is it?

The CRC Energy Efficiency Scheme is a UK Government initiative designed to reduce the emissions from UK companies who are currently excluded from the EU emissions trading scheme.

Qualifying organisations will have to purchase allowances in April 2012 to cover their emissions, set initially at £12/tonne CO2.

There will be a publically disclosed league table of organisations performance in the scheme at reducing emissions.

What will companies have to do?

In order to be compliant with the scheme there are a number of steps companies will have to take:

1. Collect and verify energy usage figures
2. Submit registration information
3. Monitor energy usage from April 2010
4. Purchase appropriate allowances in April 2012
5. Submit evidence pack to verify emissions

There are significant penalties for non compliance with £5,000 + £500 per day for failing to register and £40 per tonne for emissions incorrectly reported.

In order to minimise the amount that organisations pay under the scheme, structural and behavioural changes are required to reduce carbon emissions and overall energy consumption.

How can Carbon Statement help?

Companies responding directly to the scheme will have to manage the administrative, technical, legal and financial burden of compliance with the scheme. Carbon Statements' team of experts can help in any of all of the following areas:

1. **Measurement**
 - + Initial assessment of energy usage
 - + Define qualification or exemption from scheme
2. **Registration**
 - + Production and submission of documentation
3. **Reporting**
 - + Ongoing online reporting of energy usage
 - + Production and submission of evidence pack
4. **Reduction activities**
 - + Identify areas for emission reduction
5. **Verification**
 - + Verify emissions reported
 - + Support through any audit process

By working with Carbon Statement you will be able to relieve the burden of compliance, minimise the amount of allowances you need to buy, maximise your position in the league table and avoid the significant costs of inaccurate reporting.

Contact us now on **020 7298 6181** to understand your liabilities and opportunities under the CRC.
